BALL CATCH INSTALLATION INSTRUCTIONS

REQUIRED TOOLS:
Hammer, Drill, Tape

1) Locate the Ball and Catch.

2) On the strike side of the door, measure 2” down from the edge of the stile and then place a mark centered on the top rail.

3) Using a 15/16" Forsner bit, drill a hole 1-1/8" deep at the location marked in Step #2.

4) Insert the ball into the hole drilled in Step #3.

5) The ball should be a snug fit so a hammer may be used to tap the ball into place.

6) When fully installed, the brass ring at the top of the ball catch should sit flush with the top rail of the door.
