EXTERIOR LITE
CAULK REMOVAL INSTRUCTIONS

REQUIRED TOOLS:
Glass Cleaner, Utility Knife, Putty Knife, Cleaning Rags

1) Spray the glass down with window cleaner to prevent the caulk from re-sticking to the glass during the cleaning process.

2) Begin by removing the caulk between the glass and the frame. Using a utility knife, place the blade at a 45 degree angle towards the lite frame and cut the excess caulking around the perimeter of the frame.

3) Next, carefully use the putty knife to scrape the excess caulk off of the glass.

4) Once the caulk between the glass and the frame has been removed, remove the caulk from between the frame and the door surface. Using the utility knife SLOWLY cut around the perimeter of the lite frame, holding the utility knife at a 45 degree angle toward the lite frame.

5) Next, carefully use the putty knife to remove the remaining caulk around the frame.

6) Once all of the caulking has been removed, use cleaning rags to drive off any remaining glass cleaner on the lite.
