INTERIOR FRAME ASSEMBLY

REQUIRED TOOLS:
Drill, 1/8" drill bit, philips bit, (6) 1 5/8" coarse thread screws, bar clamp, saw horses

1] Layout and inspect the frame parts.

2] Place parts on a level surface, such as saw horses, ensuring the door stop meets and is facing the same direction on all parts.

3] Clamp parts together to ensure a proper miter at the corners, and make sure the head is flush with the bottom of the dado on the jamb legs.

4] Pre-drill 3 locations on each jamb leg into head. Holes should be centered in the thickness of the head - 1/2" from the top, centered in the jamb width, and 1/2" from the bottom.

5] Fasten parts together using recommended screws.
