PAINTING A LITE FRAME

REQUIRED TOOLS:
Latex Primer, Latex Paint, Painters’ Tape, Cleaning Rags, Mild Detergent

1) Clean the frame using soap and warm water. Wipe clean with a dry rag. Make sure frame is completely dry before moving on to next step.

2) Tape the entire area around the lite frame, both on the door itself and the glass. Over spray will occur, so taping is important.

3) Prime the frame using Rust-Oleum® Specialty Plastic Primer (557-7100 or 551-2183).

4) Paint the frame using a high quality latex paint or spray paint. Let dry before removing the masking tape.

5) Enjoy!
