STEEL ENTRY SYSTEM
FEATURES AND BENEFITS

Our MASTERCRAFT® warranty covers your exterior steel door against manufacturing defects in materials and workmanship for as long as you own the door. All manufactured lites carry a separate limited lifetime warranty. (non-transferable)

Complete Frame System
Choose from multiple frame options to create an energy efficient, prehung unit, featuring high performance compression weatherstripping.

Energy Efficient Insulated Glass
Door units come standard with safety tempered insulated glass.

Reinforced Lock-Block
Added to provide strength and security.

Rigid Steel Construction
Durable 24 gauge galvanized steel surfaces resist rust, peeling and warping.

MASTERCRAFT® Steel Doors are built with a feature wood stile and composite rail perimeter to create a thermally broken frame that delivers maximum protection against cold penetration.

Polyurethane Foam Core
An environmentally friendly Polyurethane foam is sprayed in, allowing it to fill every inch of the door. This helps make MASTERCRAFT® Steel Doors one of the most energy efficient doors on the market.

High Definition Door Panels
Deep embossing creates a sharp and detailed look, adding to the curb appeal of each door. Choose from primed or 7 prefinished colors to match your home.

Double-Bulb Sweep
The flexible double-bulb bottom sweep creates a tight seal to prevent water and air infiltration.

Superior Sill Construction
Our sill is designed to prevent energy loss and build-up of condensation. Each sill features a composite bottom that will not rot.
