SILL HEEL REPLACEMENT

REQUIRED TOOLS

1. Remove the damaged sill heel by using a putty knife to pry the sill heel from the sill.

2. Use pliers to remove any remaining finishing nails and sill heel material from the back of the sill.

3. Measure the sill.

4. Cut the new sill heel to length.

5. Place the sill heel against the back of the sill, and nail the sill heel in place using 3/4" finishing nails.
